### How to Use

Coloring	<ol style="list-style-type: none"><li>1. Use after evenly mixing this tinter before coloring.</li><li>2. Mix the colors by adding a small amount of tinter to the paint to be used for coloring, while checking the color change.</li><li>3. Color differences before and after drying may occur depending on the product. So, please check the color change after drying.</li><li>4. The color may look different depending on the light source. So, check the color in accordance with the coating conditions if possible.</li><li>5. Upon coloring, add the tinter while stirring the paint to be used for coloring.</li><li>6. Sufficiently stir the paint until the tinter is completely mixed.</li></ol>
Remarks	<ol style="list-style-type: none"><li>1. As it is a tinter for water-based paint, it cannot be used for oil-based paint.</li><li>2. As this product is a tinter, it cannot be applied by itself.</li><li>3. During winter, store this product by preventing it from freezing.</li><li>4. As this product has excellent tinting power, use it by adding a small amount at a time. For toning of a very light color, the tinter can be diluted with water to lower the concentration.</li><li>5. When using the product having a water-based paint name, please contact the technical team of this company to make an inquiry about whether it can be used.</li><li>6. In the case of excessive use, water resistance, gloss decline, and delay in drying may occur. Therefore, for toning of darker colors, please contact our technical team.</li></ol>
