## **HILAC PLUS TOP COAT**

\*\* This product can be used inside multi-use facilities and 100-500 unit apartment houses under The Indoor Air Quality Control Act.

This paint is made mainly of proxylin, high-grade alkyd resin, and white pigment. It is a high solid lacquer for wood furniture and the interior wood part of buildings, which is superior to existing lacquers in film formation and gloss. It is a proxylin lacquer that forms a firm, beautiful and smooth coating film with excellent print resistance, water resistance, oil resistance, and abrasion resistance.

Usage	Application for wood parts inside buildings and other wood parts of furniture						
Specification							
Paint type	Proxylin lacquer						
Drying time	Category 5℃			20℃		30℃	
	Set-to-touch 15 minu		utes	10 ו	minutes	5 minutes	
	Dry-hard 2 hou		urs	50 minutes		30 minutes	
	Time required for re- coating (min.)			2 hours			
Thinner	DR-170(dilution rate: 40~60%, volume ratio)		Coating Method		Brush, roller, spray coating.		
Specific gravity	Approx. 1.2		Solid volume ratio		42 % (Based on white gloss)		
Theoretical Coverage	8.4m²/l/2times(Based on white gloss)			ness of d film	Approx. 50μm		
Re-coating interval	20℃, sufficient ventilation for a minimum of 1~2 hours		Gl	oss	Designated g	Designated gloss	
Color	White, other colors						
Product Properties (Physical Property Data)							
Workability	Workability is good due to its quick-drying ability.						
Film property	Scratch resistance and film formation are superior.						
How to Use							
	1. Smooth the rough surface of the substrate by grinding it with sandpaper #180-220 along the grain.						
Surface treatment	2. Completely clean grease or contaminants and abrasion powder on the surface of the substrate and						
	thoroughly dry it.						
	3. Thoroughly dry the wet wood and completely remove the mold before coating.						
Coating Method	1. Primer						
	① After finishing surface treatment, apply the HILAC PLUS SURFACER once with a dry film thickness						
	of 25µm. At this time, dilute with a specified thinner (DR-170) up to 60%.						
	② After at least 1~2 hours at 20°C following primary undercoating, polish with abrasive paper of						
	220~320 mok and apply the HILAC PLUS SURFACER once more with a spray to get a dry film						
	thickness of $25\mu\text{m}$ . At this time, dilute with a specified thinner (DR-170) up to 60%.						
	2. Top coat						
	① After at least 40~50 minutes at 20°C following second undercoating, polish with abrasive paper of 220~320						
	mok and apply the HILAC PLUS TOP COAT twice with a spray to get a dry film thickness of $30\mu\text{m}$ .
